PICTORIAL GUIDE:
MOLOKAI ROAD SURVEY AND EXPERT INTERVIEW TARGETS

The following document includes images of species found on Molokai during roadside surveys and expert interviews. The images were used during the expert interviews and will hopefully be useful for those wishing to learn more about some of the non-native plants currently found on Molokai. All the images were taken by Forest Starr and Kim Starr (USGS). Molokai specific images were used whenever possible, but not all the images are from Molokai. This document and many more images of these species can be found at www.hear.org/starr.
